Polish Interactive Whiteboard

Help for teacher

- easy to use
- clean hands all the time
- quick to install

Multimedia lessons for students

- modern education
- concentrates attention
- free education resources

For every school

- high quality and fast operation
- works on every surface
- price revolution

Modern technique - moderate price

The Polish Interactive Whiteboard is the first on the market solution using a wireless possibility of writing on a board, which can be any flat surface. Remote-controlled communication works wirelessly, without any cables.

The Polish Interactive Whiteboard is, in fact, an electronic pen with which a user "writes" on a board, a screen or a wall, exactly like, with chalk on a blackboard. The camera, attached to the projector and paired with the computer follows the movements of the pen and copies them on the computer's screen. The device is small and light.

The Polish Interactive Whiteboard allows to write "freely" on a surface where the picture from the projector is displayed , irrespective of the contents (presentations, pictures or software). The user can underline, mark, draw or paint on it. A simple and readable picture menu, installed in the teacher's computer can be operated by any interactive whiteboard user.

Solution description

The Polish Interactive Whiteboard enables writing with the electronic pen on any surface on which the picture from the projector is displayed. It can be a whiteboard, a screen or any wall. The camera, attached to the projector, follows the movement of the electronic pen and sends information to the computer via USB cable.

The software which operates the interactive whiteboard enables the electronic pen to operate in a mouse mode. Free presentation software offers many functions useful during lessons or presentations: writing, marking, erasing, magnifying, drag the curtain, ready to go backgrounds, screen storage and much more. The software is fully transparent and enables working with any application or PC desktop.

Operating the electronic pen is similar to operating a mouse and works in an intuition way. Ergonomic shape and only one button to press makes the pen a very user-friendly device for every student, no matter the age.

The big advantage of the Polish Interactive Whiteboard is the simplicity of calibration. In case of the installing interactive whiteboard on the ceiling mounted projector, the calibration is done only once, after the first installation of the PTI software on the teacher's computer. The Polish Interactive Whiteboard is powered from the attached computer, with the USB cable. No extra power supply is needed. The pen is charged with the batteries.

POLISH INTERACTIVE WHITEBOARD

The set contents:

- 1 infra-red camera,
- 2 electronic pens with batteries,
- 1 installation CD,
- 1 USB cable (5m),
- 1 mounting set for projector,
- 1 user manual.

OPTIONAL ELEMENTS:

- USB cable extender (5m)
- 1 extra electronic pen.

Polish Interactive Whiteboard operation:
